

Live Performance Snapshot

Total views, reach, interactions, engagement rate and follower count sit at the top of the screen, with how much each has moved since yesterday. One glance answers how the account is doing right now.

Always Current Numbers

The dashboard refreshes itself automatically at whatever interval the client wants, from every 30 seconds during a launch to once a day for routine checks. It can also be refreshed instantly at any time.

All Accounts in One Place

If a client runs more than one Instagram account, all of them appear on a single overview screen with followers, views, reach and today's follower change. They can open any one of them for the full picture.

Phone Friendly Access

The whole dashboard works on a phone, so a client can check performance without opening a laptop.

Daily Performance Trend

A day by day view of views, reach and interactions, so clients can see exactly which days worked and which did not.

Any Date Range

Clients pick any period on a calendar, including months or years back rather than only the last few weeks. Every chart updates to that period.

Period vs Period Comparison

Two date ranges can be placed side by side with the percentage change shown on every metric. This month against last month, this campaign against the previous one, or this week against the same week last year.

Reach by Day, Week or Month

Switch between short term detail and long term direction on how many unique people the account is reaching.

Chart Detail on Click

Clicking any bar or segment reveals the exact figures behind it, plus how that day's performance split across reels, feed posts and stories.

Views Spread

Shows whether results come from a handful of hits or from consistent performance across all posts. An honest read on how reliable the content is.

Followers Gained and Lost

Not just the follower number, but how many were gained, how many were lost and the net movement across any period, with growth percentage. Two periods can be compared directly.

New People vs Existing Followers

Shows what share of reach came from people who already follow the account and what share came from people who do not. This is the number that tells a client whether the content is genuinely growing them.

Who Follows Them

Age bands, top countries and top cities of the follower base.

Gender Breakdown

How followers, reach and interactions split by gender for any timeframe, with the option to compare two timeframes.

Value per Follower

How many views, reach and interactions the account earns per follower. A quick check on whether audience size is converting into real performance.

Best Posting Times

A day of week by time of day grid showing the average views that posts published in each slot achieved, so the client knows when their content lands best.

Which Format Works Best

Reels, videos, images and carousels compared side by side on average views, reach and engagement. A direct answer to whether the account should be making more reels.

Top Performing Content

The five best posts by views, with reach, engagement and an overall performance score.

Performance Scoring

Every post receives a score out of 100 and a plain label of Breakout, Strong, Steady or Watch, so a client can tell at a glance which content worked without reading a table of numbers.

What Drives Engagement

A breakdown of engagement into likes, comments, saves and shares, showing which kind of response the content actually earns. Saves and shares are called out separately as the strongest signals.

Views to Saves Funnel

Shows how views narrow down through reach, interactions, shares and saves, making the drop off points visible.

Reels Watch Time

Average watch time per view and total time watched, so the client knows whether people are staying to watch or scrolling past.

Full Content Library

Every post in one sortable table with views, growth speed, reach, interactions, engagement rate, watch time, score and date. It can be searched by caption and filtered by format, by minimum views, or by signals such as breakout posts and fast movers.

Individual Post Breakdown

Any post can be opened for its exact views, reach, likes, comments, shares, saves, engagement rate and views per hour, with a link straight to the post on Instagram.

Live Movement Feed

A running feed of which posts are gaining views and interactions right now, useful during a launch or while a post is taking off.

Ready Made Client Summary

A written performance summary covering the period, key totals, engagement mix, top performers, best posting window and top format, ready to send as it is.

PDF Export and One Click Copy

The summary can be exported as a formatted PDF or copied straight into an email or chat.

Spreadsheet Export

Any filtered content list can be downloaded as a spreadsheet with all metrics, scores, dates and post links, for the client's own analysis or reporting.

Presentation Privacy Mode

The account username can be hidden across the dashboard, the summary and the PDF in one click, useful for screenshots, decks and shared reports.

Honest Data Reporting

Where Instagram does not supply a number, the dashboard says so rather than showing a zero, and reports what percentage of posts have each metric available. Clients see what is real, not a padded figure.
